Granada, Spain · (+34) 615 972 563 · juananjico@gmail.com · [LinkedIn](#) · [Portfolio \(GitHub\)](#)

Personal Statement

MSc candidate in Data Science & AI with strong mathematical foundations. Built ML and AI projects, including automotive demand forecasting with classical, ML, and foundation models, achieving 5-8% WMAPE, RAG-based agent with LlamaIndex for automated feature selection, and NLP customer feedback analysis for 40K+ reviews using transformers and LLMs. Proficient in Python and R. Seeking junior Data Scientist or AI Engineer roles.

Education

MSc in Artificial Intelligence <i>UTAMED</i>	Málaga, Spain <i>Oct 2025 – Current</i>
Postgraduate Program in Data Science, Machine Learning & AI <i>University of Cambridge</i>	Online <i>Apr 2025 – Current</i>
Erasmus+ Exchange <i>Universität Graz, Technische Universität Graz</i> 42 ECTS credits in MSc in Mathematics.	Graz, Austria <i>Sep 2023 – Jul 2024</i>
BSc in Mathematics <i>Universidad de Granada</i>	Granada, Spain <i>Sep 2020 – Jan 2025</i>

Projects

Automotive Demand Forecasting Framework <i>University of Cambridge Partner: Inchcape</i> - Delivered an automotive demand forecasting framework as part of a cross-functional team, achieving 5-8% WMAPE across 6 market-horizon combinations. - Conducted 500+ experiments comparing classical, ML, and foundation time-series models with different macroeconomic feature sets under walk-forward validation. - Developed RAG-based agent using LlamaIndex and Mistral 7B to automate feature selection from 13+ statistical and ML methods, (correlation, VIF, LASSO, SHAP), generating optimal macroeconomic driver subset recommendations.
NLP for Customer Feedback Analysis <i>University of Cambridge Partner: PureGym</i> - Built an end-to-end NLP ETL pipeline that processed 40K+ customer reviews, using BERTopic for unsupervised topic discovery and transformer-based sentiment analysis. - Applied Phi-4 LLM with few-shot prompting for automated topic extraction and generation of actionable recommendations for business stakeholders.

Skills

Programming: Python (advanced), R, SQL, C++
ML & DL Frameworks: TensorFlow, Keras, PyTorch, scikit-learn, XGBoost, LightGBM, Hugging Face Transformers
Foundation Models & LLM Applications: Phi-4, Mistral 7B, TimeGPT, TimesFM Fine-tuning (Instruction tuning, QLoRA) RAG, LlamaIndex, prompt engineering
Specialized Libraries: BERTopic, Gensim, NLTK, spaCy (NLP) Ultralytics YOLOv8 (Computer Vision)
Data & Visualization: Pandas, NumPy, Matplotlib, Seaborn
Languages: Spanish (Native) English (Cambridge C1 Certificate)
